

JavaScript Lab - 5 Quick Revision Notes

1. Number Handling Functions:-

1. `parseInt()` – Converts a string to an integer.
2. `parseFloat()` - Converts a string to a decimal number.
3. `toFixed(n)` – Used to keep only **n** digit after the decimal point. (syntax: `num.toFixed(n)`)
4. `isNaN()` - Checks if value is not a number.
5. `Number()` - Converts a value to a number (Only accept integer or number value).

2. Arithmetic Operators:-

Arithmetic operators are used to perform mathematical calculations on numbers.

1. `+` Addition
2. `-` Subtraction
3. `*` Multiplication
4. `/` Division
5. `%` Modulus (Remainder)

3. If-Else Syntax

```
if(condition){ }  
else if(condition){ }  
else{ }
```

4. Switch Case Syntax

```
switch(variable) {  
    case value: break;  
    default:
```
